

WATER TESTING

Eastern Laboratory Services (ELS) offers a comprehensive range of tests to confirm the make-up, quality and safety of water sources including drinking water, waste water and environmental water samples.

Tests are designed to detect and monitor the presence or absence of contamination by total coliform bacteria and fecal coliform bacteria (i.e. E. coli).

Tests are conducted on potable (drinking) water, such as well water, and in non-potable treated water, such as swimming pools and waste water.

ELS also performs tests to check levels of chlorine in treated well water and in household tap water for bacteriological testing purposes.

Certifications

- Michigan Department of Agriculture
- Ohio Environmental Protection Agency (EPA)
- Ohio EPA-reporting laboratory

Testing is easy and convenient

- Check and credit card are accepted

Coliform/E. coli testing

- **Presence/absence:** will be positive or negative for coliform and E. coli above EPA safety limits
- **Most probable number:** will provide you with the number of colony forming units of coliform/E.coli in the sample
- Turnaround time is as fast as 24 hours if requested

Analytical testing

- Chemicals
- Metals
- Inorganics and more

Additional available testing

- Cooling water or glycol samples
